

Motivation

- The process by which a person's efforts are energized (intensity), directed and sustained (persistence) toward attaining a goal.
- The willingness to exert high levels of effort to reach organizational goals, conditioned by the effort's ability to satisfy some individual need.
- There are two types of theories – Content (Early Theories) and Process (Contemporary Theories).
- Content theory is based on human needs and Process theory assumes behavior is determined by expected outcomes.

Content Theories: Maslow's Hierarchy of Needs

Maslow's Hierarchy of Needs

- Physiological Needs: Air, water, food, shelter & sexual satisfaction.
- Safety Needs: Security and protection from physical & emotional harm.
- Social Needs: Affection, belongingness & acceptance.
- Esteem Needs: Internal factors like Self respect, Autonomy & Achievement and External factors like Status, Attention & Recognition.
- Self Actualization Needs: The desire to become everything one is capable of becoming.

McGregor's Theory X & Theory Y

- McGregor identified two different sets of assumptions about employees.

❑ Theory X

- People have an inherent dislike of work.
- Work is of secondary importance and managers must push employees to work.

❑ Theory Y

- Work is as natural as play or rest.
- People derive a great deal of satisfaction from work.
- People have the capacity to accept, even seek responsibility and can exercise self direction.

McGregor's Theory X and Theory Y

Theory Y - a set of assumptions of how to manage individuals motivated by higher order needs

Theory X - a set of assumptions of how to manage individuals motivated by lower order needs

Comparison of Assumptions

Factor	Theory X Assumptions	Theory Y Assumptions
<i>Employee attitude towards work</i>	Employees dislike work and will avoid it if at all possible.	Employees enjoy work and will actively seek it.
<i>Management view of direction</i>	Employees must be directed, coerced, controlled, or threatened to get them to put forth adequate effort.	Employees are self-motivated and self-directed toward achieving organizational goals.
<i>Employee view of direction</i>	Employees wish to avoid responsibility; they prefer to be directed and told what to do and how to do it.	Employees seek responsibility; they wish to use their creativity, imagination, and ingenuity in performing their jobs.
<i>Management style</i>	Authoritarian style of management	Participatory style of management

Alderfer's ERG Theory

McClelland's Need Theory

Need for Achievement (nAch) – This is the need for challenge, for personal accomplishment and success in competitive situations. A person with a high need for achievement has three distinct characteristics like personal responsibility, feedback and moderate risk.

Need for Power (nPow) – This is the need to dominate, influence and control people. The people with a high need for power look for position of leadership. They like to set goals, make decision and direct the activities.

Need for Affiliation (nAff) - A need that concerns an individual to establish and maintain warm, close & intimate relationships with other people.

Herzberg's Two Factor Theory

From research, Herzberg concluded that job dissatisfaction and job satisfaction arose from two separate sets of factors (Hygiene & Motivation).

- **Dissatisfiers (hygiene factors)** included salary, working conditions, and company policy – all of which affected the context in which work was conducted. Positive ratings for these factors did not lead to job satisfaction but merely to the absence of dissatisfaction. (Ex: Extrinsic - Employee's feelings)
- **Satisfiers (motivating factors)** include achievement, recognition, responsibility, and advancement – all related to the job content and the rewards of work performance. Positive ratings for these factors lead to job satisfaction. (Ex: Intrinsic - Job enrichment)

Motivation-Hygiene Theory

- 
- Company policy & administration
 - Supervision
 - Interpersonal relations
 - Working conditions
 - Salary
 - Status
 - Security

Hygiene factors avoid
job dissatisfaction

Motivation factors
increase job satisfaction

- Achievement
- Achievement recognition
- Work itself
- Responsibility
- Advancement
- Growth

Herzberg's Two Factor Theory

MOTIVATORS

Satisfaction

No Satisfaction

HYGIENE FACTORS

No Dissatisfaction

Dissatisfaction

Process Theories:

Adam's Equity Theory

- Equity theory is based on the assumption that a major factor in job motivation is the individual's evaluation of the equity or fairness of the reward received.
- Equity can be defined as a ratio between the individual's job inputs (such as effort or skill) and job rewards (such as pay or promotion).
- According to equity theory, individuals are motivated when they experience satisfaction with what they receive from an effort in proportion to the effort they apply.

Adam's Equity Theory

- People judge the equity of their rewards by comparing them either to the rewards others are receiving for similar input or to some other effort/reward ratio that occurs to them.

Ratio Comparison

- $O/I\ a < O/I\ b$
- $O/I\ a = O/I\ b$
- $O/I\ a > O/I\ b$

Perception

Under-rewarded (Equity Tension)

Equity

Over-rewarded (Equity Tension)

Victor Vroom's Expectancy Theory

- Expectancy theory argues that the strength of a tendency to act in a certain way depends on the strength of an expectation that the act will be followed by a given outcome and on the attractiveness of that outcome to the individual.

The theory focuses on three components and relationships:

Components

- **Expectancy:** Belief that effort leads to performance.
- **Instrumentality:** Belief that performance is related to rewards.
- **Valence:** Value or importance placed on a particular reward.

Victor Vroom's Expectancy Theory

Relationships

- **Effort-performance relationship:** The probability perceived by the individual that exerting a given amount of effort will lead to performance.
- **Performance-reward relationship:** The degree to which the individual believes that performing at a particular level he or she will attain the desired outcome or expectations of his employer.
- **Rewards-personal goals relationship:** The degree to which organizational rewards satisfy individual personal goals or needs and the attractiveness is of those potential rewards for the individual.

Victor Vroom's Expectancy Theory

Expectancy Model
